ENTERPRISE BACKUP

Don't get caught without internet.

STAY CONNECTED 24/7 WITH INTERNET BACK-UP VIA SATELLITE

Internet connectivity is crucial in allowing most enterprises to carry out their core functions, even in remote areas. Fibre and communication cable cuts are much more common than imagined. Accidents, animals, natural disasters, vandalism and weather all cause communication blackouts for millions of people annually.

Companies and governments lose money every year due to inevitable short telecom network disruptions, bringing business to a standstill. Deloitte estimates that normally well-connected locations can lose up to 2% of their yearly revenue for every day without connectivity.

That's where Kacific Enterprise Backup can help, by providing a secondary high-speed internet connection via a small satellite dish. This very affordable on-demand, hot-backup package allows organisations, factories, and enterprise branches to quickly and automatically recover. They will be able to continue with normal activities, even if their primary internet access is compromised.

ENTERPRISE BACKUP

Kacific Enterprise Backup includes a one-off satellite dish installation at each site, combined with a simple per-month, per-site package, far offsetting the cost of regular, short or mid-term internet disruptions. It can be scaled to suit business needs from SMEs up to large-scale enterprise sites.

FEATURES

High-speed internet on-demand with powerful broadband satellite service

Can be deployed anywhere in city, suburban or rural branches

No hidden costs; works like an insurance policy on your connectivity

Built into your existing solution

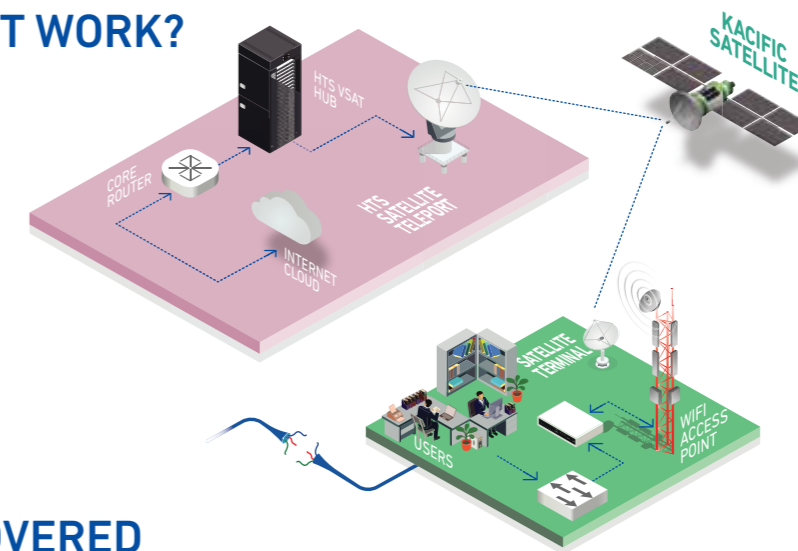

75cm or 1.2m satellite dish
