Reliable, affordable connectivity to integrate into mobile networks.

STRENGTHEN THE CORE. REACH OUT TO THE FRINGE.

Kacific Mobile Backhaul allows operators to meet coverage demand in remote areas and data demand in congested urban areas.

MOBILE BACKHAUL

Kacific Mobile Backhaul provides 3G and 4G coverage to end-users, connecting them to any small cell or regular mobile tower. Choose between dedicated Kacific VSAT capacity and pooled Kacific bandwidth. You can rapidly deploy small, low power consumption satellite dishes in places beyond the reach of costly terrestrial infrastructure, vastly reducing the cost and complexity of remote terminal installation.

In urban areas, Kacific Mobile Backhaul fuels a high-speed data system at a cost per GB that is competitive to terrestrial technologies. Flexible bandwidth shared between distant sites allows you to offload congested urban areas during peak hours, meeting demand as it occurs.

- Affordable, high-speed internet
- Flexible bandwidth distribution
- Rapid, low-cost deployment
- Seamless integration into existing networks

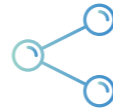

High-speed bandwidth from Kacific's next-generation Ka-band satellite combined with low-cost, rapidly deployed infrastructure allows you to deliver affordable, reliable cellular connectivity to everyone everywhere and always meet demand.

FEATURES

Dedicated wholesale bandwidth

Share bandwidth across multiple sites

High-throughput modem
(up to 200 Mbps)

Satellite dish sizes:
1.2m, 1.8m, 2.4m, 4.5m

Link availability between
99.1% and 99.9%
depending on terminal
size and location

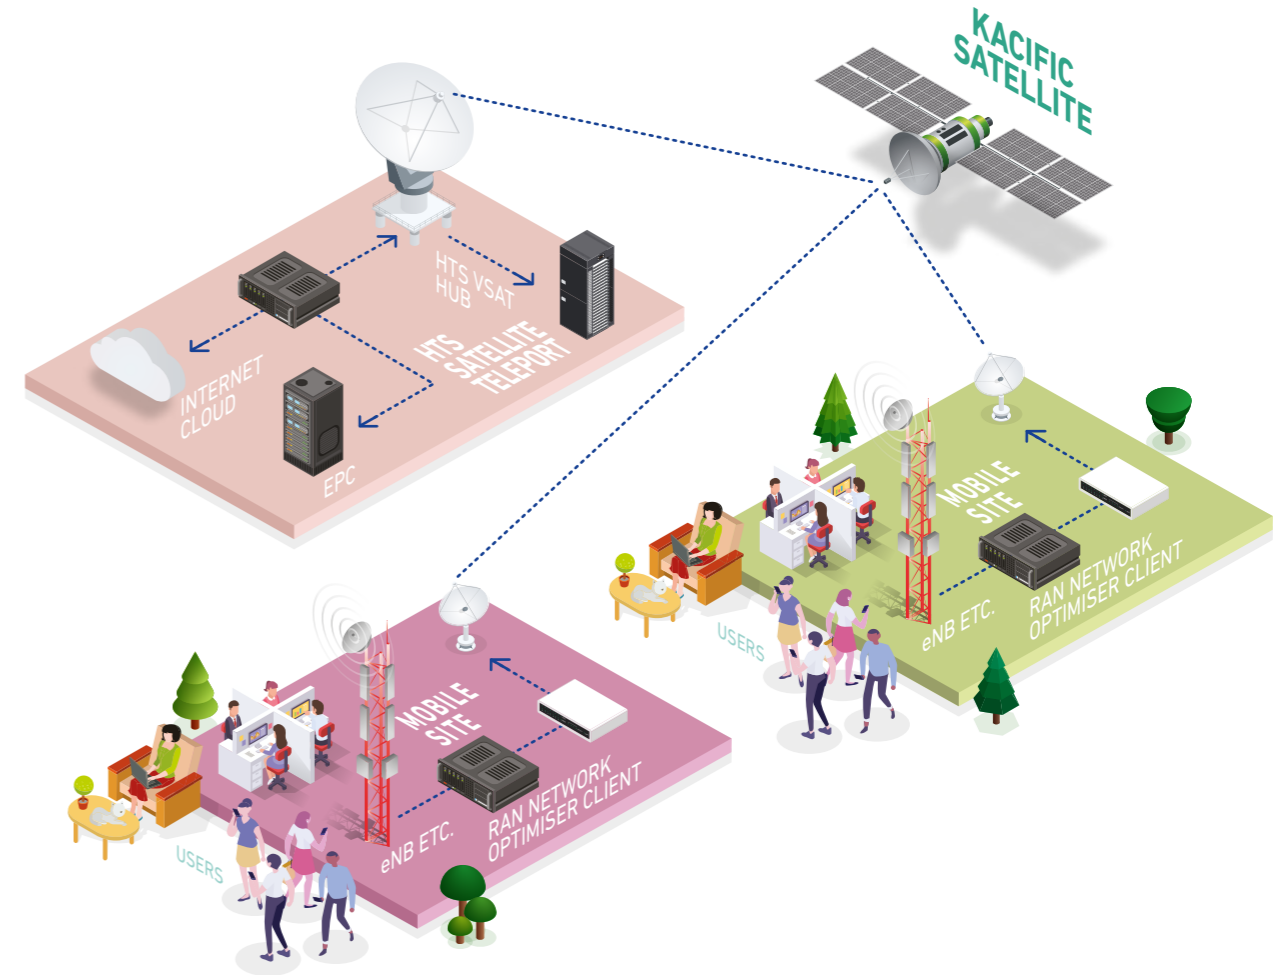

Manage your own
bandwidth across
your cellular sites

Teleport and internet
connectivity included

HOW DOES IT WORK?

REGIONS COVERED
