CCTV AND REMOTE DATA COLLECTION

Protect your premises – no matter where.

MONITOR AND PROTECT 24/7

Deploy remote monitoring or data collection devices to secure facilities, installations, perimeters and borders with Kacific CCTV and Remote Data Collection—our sophisticated, reliable, flexible broadband security solution.

With a high data transmission rate and very low costs, Kacific CCTV and Remote Data Collection maintains a constant connection between surveillance and their control centres, or between on-site data collection systems and data storage servers. Kacific CCTV and Remote Data Collection offers a cost-effective solution to security firms, governments, research operations, film crews or mining, oil and gas companies.

CCTV AND REMOTE DATA COLLECTION

Our Kacific1 satellite offers a coverage footprint that enables the deployment of high-speed data or video collection links across vast territories, sensitive sites and challenging terrains. Field personnel, local and central control centres can use secured applications – anywhere – to remotely monitor perimeters and premises, prevent unauthorised entry, analyse large amounts of data, send raw film footage to post-production, or even remotely grant semi-automated access to secure facilities.

Using our expertise in end-to-end integration, you can seamlessly connect our technology with your existing surveillance networks and decide on the distribution of connectivity to cameras.

- Reach remote sites and challenging terrain
- Cost-effective, reliable connection
- Easy installation
- Large upload capacity and cloud storage

FEATURES

Powerful 75cm or 1.2m, fixed or transportable satellite dishes

Rapidly deployed and effortlessly scaled network

Flexible plans available: Security monitoring plans with or without internet bundle

Comes with secured cloud data storage or dedicated physical data storage at secured location
